Get Hip to HIPAA!

It's true. Softshare is very hip to HIPAA, the Health Insurance and Portability Act of 1996. We provide everything you need to create and exchange HIPAA-compliant EDI transactions with your Payer or Provider.

Softshare is not a clearinghouse. Instead, we give you the tools to perform your own in-house translation and secure communications. Our HIPAA solution consists of three components: a data translator (Softshare Delta), a set of predefined models and maps (HIPAA Starter Pack), and a communications application (Softshare ECS).

"I've now got four 834 maps, one 837P map, and one 837I map completed and working.

I love Delta— it is so easy to work with!"

Softshare Delta

Softshare Delta is Softshare's sophisticated data translator. It supports conversions between EDI and electronic data file formats (the two major formats required for HIPAA compliance) as well as conversions to and from XML, database, and text formats.

For more information on Softshare Delta, visit our in-depth Delta pages.

HIPAA Starter Pack

With the HIPAA Starter Pack, you are able to save a considerable amount of time modeling the required HIPAA ANSI X12 transactions in Softshare Delta. The HIPAA Starter Pack includes two complete sets of predefined models; one set is compliant with the original 004010 implementation guides and the other set is compliant with the Addenda.

Optionally, you can choose the expanded HIPAA Starter Pack which also

includes [four predefined sample maps or crosswalks](#). It's likely that you'll need to fine-tune these sample maps before they will run seamlessly on your unique system, but they provide an excellent starting point.

Softshare ECS

Softshare ECS is a server-based communications application that works closely with Softshare Delta. It supports today's prevalent Internet communication protocols, moving HIPAA data into, out of, and across your enterprise in real time. Softshare ECS incorporates standard security protocols such as secure FTP and AS1.

For more information on Softshare ECS, visit our in-depth [ECS pages](#).
